## **DETAILED ACTION**

### ***Specification***

Applicants should note the disposition of the parent application in the specification.

### ***Allowable Subject Matter***

Claims 9-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Claim Rejections - 35 USC § 103***

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Poser et al '579. Figure 7 of the patent discloses an adjustable impeller in a size reduction machine including threaded collar 72 associated with the drive shaft and threaded member 90 associated with the impeller. Applicants' invention is to make the collar and threaded member integral with their associated elements. Making known parts integral does not result in patentable subject matter. In order to ease assembly/disassembly, it would have been obvious for one of ordinary skill in the art at the time of the invention to modify Poser et al '579 by making the collar integral with the drive shaft and member 90 integral with the impeller since such modifications would have been well within the scope of one skilled in the art once the basic apparatus was known.
